2016 DRUPAL SITE SUPPORT CHECKLIST

A good Drupal Support plan calls for preparedness. Use this checklist as a guide to survey your Drupal site's supportability and make sure it's healthy in 2016.
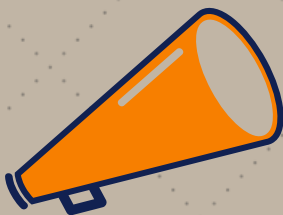

Encryption

If users access your site over a public network then private data can be vulnerable to theft or detection. Step up security with encryption and TLS protocol. Search engines also rank secure sites higher in their results. Read more

Load Testing

Users expect fast page load times so make sure you understand when your site's peak performance times are and how well it responds to increased traffic. The holidays are especially busy for eCommerce sites. Read more

Communication Tools

Does your team use a ticketing system, chat software or on-call SysAdmin support? Are you still relying on email alone to do the trick? Rally your team around common tools to communicate more efficiently. Read more

Security Updates

Drupal's security team releases updates on a regular schedule, typically once per month. Check to make sure your Drupal site's installed the most recent updates. Read more
